GreenSeas Summer School:  
Global plankton data: ecosystems, monitoring and modelling in an era of global warming

University of Capetown/ Africa House  
Capetown, South Africa  
28th Jan – 3rd Feb 2013

During the GreenSeas Summer School students will learn how to employ a combination of observation data, environmental indicators and numerical simulations to obtain an integrated, cross-disciplinary, global-in-scope understanding of global planktonic ecosystems and their role in a global information service, of further importance for assessment of environmental pressures and risks, including tensions and conflicts related to the depletion of natural resources.

Applications welcome from PhD students late in their term and early PostDocs
